

Instructions and how will this work be used in September 2026?

This work is designed to help you gain subject knowledge and some of the research skills which they will need across the two years of the Economics course. This work will be used in the first few lessons to introduce major topics in the Economics syllabus. Please complete this work on lined paper and hand it in to your Economics teacher in the first week's lessons.

This summer work includes both micro and macroeconomics. Research and the ability to handle data is an important aspect of Economics so there is a research task included which asks you to interpret some data sets. **All work is compulsory and should take 4-5 hours to complete.**

You should download the worksheet and use the video resources to complete all sections. Each video resource pertains to a specific section, so the first video relates to the microeconomics section of the worksheet and should be used to complete exercises 1 through 5. The second video link relates to the macroeconomic section of the worksheet and should be used to help with the research task and questions that follow on the worksheet.
